

Potential Animal Usage Area

KNOW YOUR RISK:

Laboratory animal allergens may be generated in this area. Laboratory animal allergies can pose a serious health concern for those who work with or near animals. Lab animal allergens can be found in dander, hair, saliva, urine, and serum of laboratory animals. Exposure to a lab animal allergen may result in an allergic response. An allergic response may involve symptoms such as allergic rhinitis or conjunctivitis (a runny nose, itchy eyes, tearing, sneezing & congestion) or contact allergic dermatitis (red, bumpy, itchy rash or hives & welts). Severe allergic responses may include asthma or anaphylaxis.
